The following action is in response to the amendment received March 17, 2005.

***Allowable Subject Matter***

Claims 1 and 3-9 are allowed.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to show or render obvious a transmission as defined in claim 1 wherein at least one tooth of the driving disc or of the clutch basket has an axially oriented slot formed therein and at last one of the tooth spaces of the clutch basket has a slot formed therein.

The art of record also fails to show or teach the transmission as defined in claim 5 having circumferentially displaced teeth on the driving disc or the clutch basket and wherein the driving disc and the transmission input shaft are connected to one another in a manner fixed against relative rotation. While the reference to Kobayashi, previously applied against claim 5, shows circumferentially displaced teeth; the disc in Kobayashi is an axially slidable brake disc, rather than a disc that drivingly connects the basket to the input shaft, as now claimed. The tooth displacement in an axially slidable brake or clutch disc would not suggest to the artisan use of the tooth displacement in a driving plate for connection of the basket to the shaft.
